

HYDROCHANNEL DRAIN BOARD SYSTEM

BASEMENT FOOTING

MAKE **WET, NASTY** BASEMENTS
A THING OF THE **PAST.**

HYDROCHANNEL
DRAIN BOARD SYSTEM
(AVAILABLE IN CLEAR)

A BASEMENT WATERPROOFING SOLUTION FOR ANY FOUNDATION

We know Foundations are most susceptible to leaking from around the perimeter. HydroChannel provides an unobstructed path to any "beside-the-footing" basement drain system, quickly channeling water to the sump pump before it can impact the health and safety of the home. Finally, the bright white design creates a seamless look with basement wall panels and vapor barriers.

HOW DOES IT WORK?

Basement floors are typically poured directly on the footing, causing ground water seepage to flow up and over the basement slab. HydroChannel creates an air gap that allows this water to freely flow to a subfloor water removal system. HydroChannel's built-in contact points allow re-poured concrete to bear against both the wall and the footing for unsurpassed structural integrity. Joiner clips cap off the system to provide added protection against moisture, odors, and radon gas.

WHY HYDROCHANNEL?

1 Effectively channels water to drain tiles and sump pumps

2 Restores structural integrity to basement slabs

3 Will not clog!

Clean, professional looking installation, Made in the **U.S.A.**

Rear wall flange integrates with wall panels and vapor barriers

Eliminates water seepage, reducing musty basement odors
