

STRENGTH. CONFIDENCE. SIMPLICITY.

Carbon Guard is far superior than older methods of basement wall repair such as steel I-beams and tie-back anchors. Originally developed by NASA and the US Military for high-strength applications, Carbon fiber has become economical enough over the past 20 years for residential use and is quickly becoming the new standard in foundation repair.

With the strongest epoxy in the industry, the Carbon Guard straps bond to the concrete and will not stretch, preventing the concrete from moving.

Carbon Guard installs in a day, is non-invasive, and provides the confidence you need in your foundation walls.

A PRODUCT STRONGER THAN STEEL; A SYSTEM STRONGER THAN THE COMPETITION.

The Carbon Guard Stabilization System is a fully anchored tensile-tensioned system.

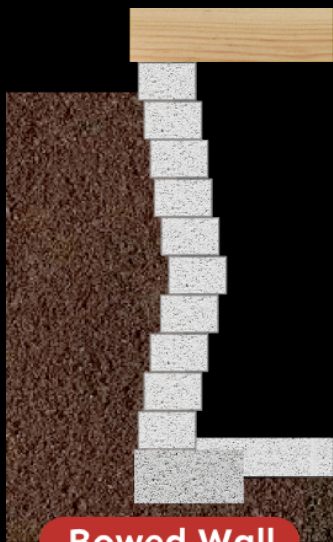

Anchoring the fiber above and below the wall allows for 100% strength from the Carbon fiber, and prevents de-bonding unlike surface mount carbon fabrics.

30 YEAR WARRANTY

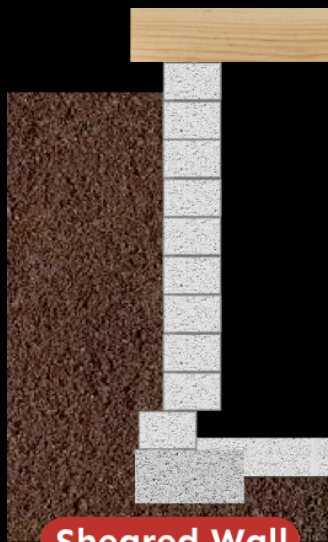

ARE YOUR WALLS SHOWING SIGNS OF MOVEMENT?

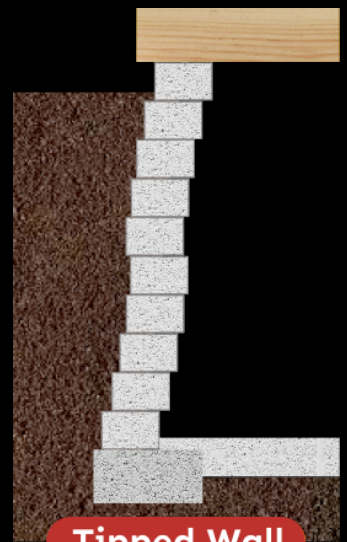

Carbon Guard is the SOLUTION

Bowed Wall

Sheared Wall

Tipped Wall

Stop these problems for good!

Improves resale, disappears behind paint or finished walls.
