

YOUR SOLUTION FOR A HEALTHIER HOME

CRAWL SPACE ENCAPSULATION

TRANSFORM YOUR **NASTY CRAWL SPACE** INTO A DRY, USABLE SPACE

CRAWL SPACES CAN BE *BAD FOR YOUR HOME*

Crawl spaces are easy to create and save money during construction. Some builders might include cheap plastic sheeting, but this doesn't protect your home. Common plastic sheeting quickly decays, cracks, and doesn't stop damaging moisture and nasty odors from attacking your home.

A COMPLETE ENCAPSULATION *SYSTEM IS THE SOLUTION*

A moisture barrier is installed across the floor of the crawl space, then fastened to the walls. We also seal the vents. We finish up your system with durable vent covers and doors, and suggest a dehumidifier designed specifically for the lower level. These are crucial components of a dry, safe, and healthy crawl space and home.

WHY IT HAPPENS?

THE STACK EFFECT

50% of the air you breathe in your home comes from the lower level. It's called the STACK EFFECT. As air warms it rises naturally, carrying with it all the spores, moisture, and odors up from the crawl space and into the rest of your home.
