

## FROZEN DISCHARGE LINE PROTECTION

### A SIMPLE SOLUTION FOR BASEMENT FLOODING IN THE WINTER

#### WHY WORRY ABOUT FROZEN DISCHARGE LINES?

During the cold winter months, if the discharge line freezes or becomes blocked by the snow or ice, the sump pump will not be able to lower the water level in the pit, causing the pump to continuously run and burn out. This leaves your house unprotected. Combat these issues with the Freeze Relief®

#### GAIN THE PEACE OF MIND YOU DESERVE

The Freeze Relief® is an overflow device uniquely designed to allow water to exit from the sump pump discharge line in the event of a pipe freezing or other type of blockage. This device works automatically and requires no participation from the homeowner. Once the line thaws, the water will continue to flow along its normal course.

#### WHY FREEZE RELIEF?

**1** Prevents **freezing and clogging**, even during the coldest of months

Works automatically

**4**

**2** Prevents back-ups and **flooding in the basement**

The perfect **addition** to any home with a **new or existing** waterproofing system

**5**

**3** Easy to install and maintenance-free

Provides **peace of mind**
