

SUMP PUMP BASIN

TAKE ON MONSTER AMOUNTS OF WATER WITH SUMPZILLA

BASINS KEEP YOUR PUMP RUNNING EFFICIENTLY

The sump pump is the heart of any good waterproofing system. A sump pump basin is crucial to keeping your sump pump running smoothly and your basement dry. The basin gathers and holds water before removing water through the discharge line. The deeper your basin, the more effective your pump will be. Sumpzilla fits multiple sump pumps with elbow room to spare.

DESIGNED FOR MAXIMUM WATER INTAKE

With a hefty (384) 3/8" perforations, Sumpzilla allows for maximum water intake. It's rectangular design fits nicely into corners making concrete finishing and floor covering easier to install in your space. SumpZilla is topped off with a two-piece clear lid for convenient inspection and access. A gasket is used to seal the basin lid and protect against water vapor, odors, and radon gas.

WHY SUMPZILLA?
