

PATENTED WALL STABILIZER

LIVING WITH *CRACKED OR BOWED* BASEMENT WALLS?

RELY ON THE MOST ADVANCED *BRACING SYSTEM ON THE MARKET!*

If left alone, a cracked or bowing wall is may collapse and cause expensive damage to your home. Without excavation or homeowner assistance, The Force's unique I-beam/spring-coil design helps straighten walls over time. Unlike other systems, The Force utilizes a tension-loaded spring design that supplies a constant 1000-pound force on the wall. It works to physically straighten and structurally support the wall permanently!

WHY IS MY *FOUNDATION FAILING?*

Foundation walls can move for various reasons. During rainy periods, the heavy clay soil around your home will absorb the water. Then in the winter, this soil will freeze, resulting in pressure applied to your foundation walls. When this happens, it can cause your foundation walls to bow or even crack under pressure.

WHY THE FORCE?

1

EASY TO INSTALL

No invasive measures required

SPRING LOADED DESIGN

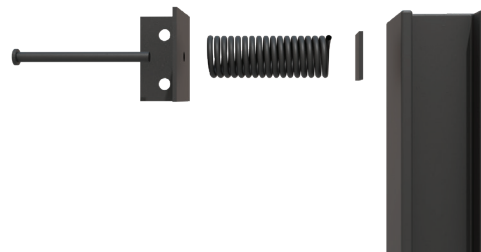

Applies 1000 pounds of constant pressure

2

3

PATENTED DESIGN

Straightens blocks or concrete walls over time
