

3 STEPS TO A DRIER HEALTHIER HOME

1 DRYSHIELD WATERPROOF WALL SYSTEM

Directs basement water seepage below the slab to the interior drainage system. Stops the evaporative effect, helping to **eliminate musty damp basement air**.

2 WATERSHIELD DRAIN BOARD SYSTEM

Creates a path for basement water seepage to the interior drain system. **Acts as a vapor barrier** to decrease basement dampness.

3 HYDRAWAY DRAINAGE SYSTEM

High flow interior drain, **channels water** rapidly to the **sump pump system** and out of the home.

These 3 systems, along with a quality sump pump and commercial grade dehumidifier, will provide you with a **dry, healthy, inviting space for years to come!**
